## Municipality

## 1.0 Overview

#### 1.1 Introduction

The Lead Service Line Replacement and Notification Act (Act), State of Illinois Public Act 102-0613, went into effect on January 1, 2022. This Act required that every owner or operator of a community water supply (CWS) that has known or suspected lead service lines (LSLs) create a plan to replace each lead and galvanized service line (if connected downstream of lead piping); submit that initial plan to the Illinois Environmental Protection Agency (Agency) by April 15th, 2024; submit by April 15th of each year after 2024 until 2027 an updated lead service line replacement plan to the Agency; and submit by April 15th, 2027 a final lead service line replacement plan to the Agency. The Act also requires that the plan is posted on the community water supply's website.

The Village of Grayslake has prepared an initial Lead Service Line Replacement Plan (Plan) in compliance with the Act and its requirements. The Plan includes the name and identification number of the CWS; an inventory of the total service lines, known and suspected LSLs, and LSLs that have been replaced since 2020; a proposed replacement schedule; a cost analysis with financing options; a prioritization plan; community outreach measures; and workforce development measures.

## 2.0 Background Information

#### 2.1 Location

[The Village of Grayslake is located in Lake County in northeastern Illinois approximately 40 miles north and 15 miles west of downtown Chicago in Lake County, IL. The Village is bound by Hainesville and the Round Lakes to the west and north, Wildwood and Gages Lake to the east, and open lands to the south. The Village corporate boundaries encompass an area of approximately 11 square miles.

#### 2.2 Community Water Supply (CWS)

The Community Water Supply (CWS) is named [Grayslake] and is IEPA Water System No. [IL0970250]. The CWS serves a population of [21,248] and has [7,024] service connections as reported to the IEPA and posted to Illinois.gov under the Illinois Drinking Water Watch.

The CWS takes ownership of the public water main while the property owner takes ownership of the service line from the public water main to the private water service meter inside the building according to the Village's Code of Ordinances, listed in Appendix 1.

## 3.0 Lead Service Line Inventory (LSLI)

#### 3.1 Summary

The definitions of water service line materials in the CWS's inventory adheres to the definitions provided by the Illinois EPA. These definitions are outlined in the table below.

Service Line Material
Copper – No Lead Solder (C)
Galvanized Requiring Replacement (GRR)
Lead (L)
Cast/Ductile Iron (0)
Unknown (U)
Unknown Not Lead (UNL)

The CWS has made ongoing efforts to complete its inventory. These efforts include those listed below: reviewing resident surveys, water meter replacement records, a property's building age, visual inspection of interior service lines, and predictive modeling for properties without known material type.

- **Building Age:** For those buildings constructed after the 1940s, service lines are assumed to be non-lead on both the public and private sides.
- **Historical Records:** Where available, historical records were used to identify service line material. Historical records could include water meter replacement records, water main replacement records, water main tapping cards, water meter cards, permit records, and documentation from maintenance and repairs.
- Visual Identification: The CWS staff recorded service line material when entering private property.
- **Resident-Provided Photos:** The CWS distributed a survey in which residents could provide photos of their service line. A sample survey mailer is included in Appendix 6. Trained staff identify the service line material based on the photos and the photo and material are recorded and saved on the CWS GIS.
- **Predictive Modeling:** Those addresses for which there are no historical records or survey responses to verify the private side of the material and are within the time period in which lead services were installed were included in a machine learning predictive model that correlates service line material to building characteristics. Any addresses that have a greater than 50% chance of having a lead service is considered suspected lead on the inventory spreadsheet.

The current inventory includes:

- The total number of services lines in the CWS for the current year;
- The material composition of each service line in the CWS's distribution system;
- The count of suspected lead service lines identified since the last inventory submission;
- The number of suspected or known lead service lines replaced since the last inventory submission

A copy of the inventory submitted to the Agency that lists the total number of service line connections, total LSLs, and total suspected LSLs is included in Appendix 2. A map of the building ages in the CWS is included in Appendix 3.

Service Material	# of Services		
	Private	Public	
Lead (L)	70	0	
Unknown	206	0	
Unknown Suspected Lead (U)	278	0	
Galvanized Requiring Replacement (GRR)	5	0	
Not Lead	569	7465	

## 3.2 Previous Replacements

The CWS has not begun actively replacing lead and galvanized service lines.

## 4.0 Funding Considerations

The funding sources for the Lead Service Line Replacement (LSLR) Program will be considered and evaluated in this section. A proposed funding plan to meet the requirement to complete the LSLR within the [fifteen (15)] year replacement timeframe will be presented.

Based on an inventory of [353] private side only LSLs and an estimated replacement cost of \$6,500, the CWS will need approximately [\$2,300,000] to fund the LSLR Program. The CWS will likely use a combination of the funding sources described in this section. With a mandated replacement rate of [7%], the CWS will plan to replace [20] LSLs annually at a projected cost of [\$153,000] in 2024 dollars.

## 4.1 Federal & State Funding Sources

Other possible funding sources would be periodically evaluated for favorability and affordability. These funding sources could include:

Illinois Environmental Protection Agency (IEPA) State Revolving Fund Loan Program (SRF)

Illinois Department of Commerce and Economic Opportunity (DCEO) Grants

HUD-administered Community Development Block Grant (CDBG)

Congressional Discretionary Funding

United States Environmental Protection Agency (USEPA) Community Change Grants

Rebuild Illinois Program

None of these funding sources currently apply to the Village's areas with Lead Service Lines.

#### 4.2 Revenue-Generating Funding Sources

The local and direct revenue generating methods that are evaluated in the Plan is:

• Resident cost sharing

The proposed cost sharing would target only homes that need replacement to meet the mandated annual LSLR rate.

#### 4.2.1 Resident Cost Sharing-

Resident cost sharing is the revenue-generating method that shares the cost of replacement with those whose properties are affected.. The Village is also dedicated to subsidize costs for residents who volunteer to have their service lines replaced. Prior to 2027, the Village will pay for 50% of the replacement cost up to \$3,000 for the private side replacement.

The CWS will evaluate this method based on affordability and ease of implementation. This method would require the ability to tie the cost sharing to the property title so that it transfers with any change of property ownership. This method is also more feasible when the intent is to cover annual loan repayments versus the total construction cost for that year.

## 5.0 Prioritization

Since the number of LSLs in the system exceeds the number of replacements the CWS can afford in a single year, the LSLR Program must include an element of prioritization. The CWS will follow the mandated replacement rate of 7% or 20 LSLs per year for [15] years laid out in the Act. The CWS will prioritize replacement project areas based on risk factors and planned companion infrastructure projects.

#### 5.1 Risk Factors

The population most at risk of exposure to lead and with the highest health risks when exposed is children and pregnant mothers in disadvantaged areas. The IEPA SRF loan program incorporates census data for median household income, children

under the age of 6, unemployment rate, poverty rate, social security rate, and supplemental security income to prioritize at-risk populations. The CWS will use the IEPA SRF scoring system to prioritize those areas with the most at-risk populations.

The CWS will also prioritize replacements in high-risk facilities such as daycares, schools, parks, hospitals, and nursing homes.

The Village does not have many high risk facilities in areas where lead is present.

#### 5.2 Prioritization Factors by Vermont Department of Environmental Conservation

When the service area of the CWS with the same level of risk contains more lead services than can be replaced in a year, the CWS will consider companion infrastructure projects such as water main replacements, water meter replacements, and road resurfacing projects when prioritizing each year's project area.

The Vermont Department of Environmental Conservation developed a prioritization rubric as a standard and transparent method for determining replacement order according to the factors discussed. The table below lists the prioritization factors and priority points as recommended by the Vermont Department of Environmental Conservation and then the priority points developed by the CWS to account for the Illinois-specific requirements of the Act and IEPA SRF-funding.

As each LSL is identified and categorized with any possible number of the prioritization factors listed below, the summation of the factors yields a prioritization points Score using the rubric, as a guide to scoring based on the criteria, as shown below. The Prioritization is in ascending Score number.

Priority Points – Vermont Department of Environmental Conservation	CWS /REL Priority Points	Prioritization Factor	LCRR Requirement
10	8	Known Lead Service Line	Required
10	80	Populations Most Sensitive to the Effects of Lead • Schools and Day Care Facilities • Homes with children and/or adults who are pregnant or may become pregnant	Required
10	10	Disadvantaged Communities	Required
8	8	Known GRR Service Line	Required
5	2	Populations Most Sensitive to the Effects of Lead • Nursing Homes • Medical Facilities	Not Required
5	8	Companion Projects (concurrent infrastructure projects)	Not Required
5	8	Compact Projects (concurrent project in the same area)	Not Required
3	8	Long Length Lead Pipe Projects (or high lead results)	Not Required
2	6	Other Factors Listed in ANSI/AWWA C810-17 § II.A.	Not Required

		<ul> <li>Service lines physically disturbed by digging, excavation, repair, or other activities</li> <li>Existing partial lead service line replacements</li> <li>Consideration of presence of lead goosenecks or pigtails</li> </ul>	
N/A	20	Funding Eligibility	Not Required
N/A	5	LSL Density	Not Required
1	5	Other Factors Significant to the Water System	Not Required

## 5.3 Emergency Work-related Lead Service Line Replacement (EW-LSLR)

The Village will consider implementing a program to provide a list of approved contractors and bid documents to residents should a private service line break occur.

## 6.0 Lead Service Line Replacement (LSLR)

## 6.1 Scope of LSLR

The work shall consist of the removal and replacement of lead or galvanized iron water services for buildings within the specified service area. The area will be determined based on prioritization, material, building age, and funding limits, but all will be within the corporate boundaries of the CWS. New copper service lines shall be installed for full and partial lead service line replacement. Full lead service line replacement shall be defined as connecting from the water main to inside the building. Partial service line replacement shall be defined as connecting from the curb box (B-box or buffalo box) to the water main. No lead piping will be left in the water system. Partial replacements will only occur where the existing service is partially lead or galvanized. Cross-sectional replacement details are included in Appendix 5.

## 6.2 Replacement Methods

The methods of installing the new service are described below. To minimize impacts to residential property and to reduce restoration, trenchless methods are preferred.

Open cut: Open cut trenching is the typical method used by plumbers, especially for properties slated for demolition and replacement. It involves digging a trench, which can cause significant exterior disruption to property owners. Interior disturbances depend on whether the basement is finished. Despite its disturbance, open cut trenching is often the most cost-effective option, particularly when restoration costs are minimal. This approach is advised based on individual circumstances.

Trenchless: Trenchless installation of water services is being explored to address concerns such as economic impact, landscape disruption, and social inconveniences associated with traditional open cut methods. Advances in trenchless technologies offer a more efficient alternative in certain situations, minimizing surface disruption and restoration time. These methods are socially appealing as they cause less destruction and require less restoration compared to open cut techniques.

Standard Horizontal Directional Drilling: Standard Horizontal Directional Drilling (HDD) involves using a drill rig on the ground surface to create a tunnel underground. To reach a depth of about 5'6" below the ground surface, the drill rig head must be positioned approximately 30 feet away from the final depth point of the water service. This may require closing the road for safety. While many pipeline and cable contractors employ this method, plumbing contractors often subcontract it out as specialty work.

Pipe pulling: Pipe pulling is the most cost-effective method among trenchless options for installing water services. It involves using the path of the existing pipe, eliminating the need for additional excavation. A new water service pipe is pulled along the existing route, often with a winch or excavator bucket with a cable. The new copper service is connected to the existing lead service in the home, effectively replacing it using the borehole left by the removed lead pipe.

The connection to the water main typically incorporates the use of a tapping sleeve and is done by a licensed plumber. The licensed plumber also connects the new service line to the existing water meter inside the house according to the State of Illinois plumbing code.

Item	Condition
1. Restoration of Interior and Exterior	Meet existing condition or better
2. Parkway/Yard Restoration	Sod, Seed in Summer
3. Field Locate B-boxes	Location by Village
4. Trench backfill	CA-6
5. Verify B-box operation at Project Completion – after surface restoration	B-boxes keyed by Village
6. Street Cross Sections	Minimum 6-inch pavement patching
7. Work Hours	Monday to Friday 7 am to 7 pm
	Saturday 8 am to 7 pm
	No Work Sunday or Holidays, except Contractor my Schedule meeting/inspection at buildings on Sunday.
8. Meter Pits	Village will be consulted prior to relocating meter to building interior and abandoning the meter pit. Contingency Pay Item for this work included in contract.
9. B-box	Mueller H-10302, Minneapolis Pattern or approved equal
10. Curb stop	Mueller Ball Style: H15150 or approved equal
11. Corp Stop	Mueller H-15000 or approve equal
12. Saddle for corp stop	Cascade CSC-2 or approved equal
13. Abandon existing Lead Service Line	Close corp stop; remove lead service from main; remove corp and reuse direct tap by placing tapping sleeve and peen end of lead service. Use abandoned corporation fitting for winter time.

The Village will use these standards when performing lead service line replacement:

## 6.3 Completed LSLR

[The CWS has not completed any lead service line replacement projects.]

## 7.0 Workforce Development

In performing projects associated with the Lead Service Line Replacement initiative, the CWS plans to develop the workforce available to perform these projects. These developmental practices include:

Smaller bids: The CWS will break the required replacements into smaller projects within the CWS, so that the bids will be smaller and more attainable for smaller firms.

Hiring local: The CWS will include a clause within the scope of work for interior work and inspections to be conducted by local contractors who have an understanding of the community.

Experience contractor teaching: An experienced contractor teaches a smaller contractor how to perform the work.

## 8.0 Resident Communication and Outreach

To ensure effective community engagement, the CWS's outreach program for the Lead Service Line Replacement (LSLR) initiative will employ various communication methods aimed at informing and involving homeowners. Central to the program's success is consistent and informative communication across multiple platforms, including meetings, press releases, door-to-door notifications, and social media channels. By leveraging these diverse communication channels, the program aims to raise widespread awareness about the significance of the LSLR program and the options available for homeowners to participate. Early successes of the program will be shared with the community to foster positive feedback and encourage support for the initiative.

To effectively communicate the goals and requirements of the LSLR program, a comprehensive outreach & communication plan is developed, outlining key messaging, target audiences, and preferred communication methods. Emphasis will be placed on building trust and transparency with homeowners, ensuring they understand the benefits of participating in the program. Notices will be sent to homeowners at least 45 days before the commencement of work, with repeated notifications every two weeks until confirmation of receipt. Special attention will be given to non-English speakers, providing translated notices and instructions for accessing additional resources. As previously mentioned, the Community Outreach and Public Engagement plan will be vast, consistent, and includes:

Stakeholder Identification: The CWS has Identified key stakeholders, including residents, local businesses, community organizations, schools, healthcare providers, and governmental agencies.

Educational Materials: The CWS is developing comprehensive educational materials explaining the importance of lead service line replacement, potential health risks associated with lead exposure, details of the replacement process, and available resources for assistance. The materials currently developed and used for LSLR outreach are added in Appendix 6.

Multi-Channel Communication: The CWS plans to utilize a variety of communication channels to reach different segments of the community, including:

- Printed materials such as program brochures, flyers, door hangers and direct mail distributed to households, businesses, and public spaces.
- Digital platforms including the village website, email newsletters, and community forums.

Door-to-door outreach by trained community volunteers or outreach workers to engage directly with residents.

Social Media Channels: The CWS intends to utilize its social media platforms (Facebook) to engage with residents regarding lead exposure concerns. Posts will include links to informative resources on the CWS's website, as well as videos and webinars explaining lead risks and the CWS's efforts to mitigate them. Social media will also be used to announce upcoming project activities, public outreach events, and success metrics such as the percentage of lead pipes replaced.

Language and Accessibility: The CWS will ensure that all materials and communication efforts are available in multiple languages to accommodate the linguistic diversity of the community. Additionally, make information accessible to individuals with disabilities by providing alternative formats such as large print or audio versions.

Personalized Outreach: The CWS will tailor outreach efforts to specific demographics or neighborhoods within the service area, taking into account factors such as income level, age, cultural background, and housing status. Engage community leaders and influencers to help disseminate information and encourage participation.

One-on-One Assistance: The CWS intends to provide personalized assistance and support to residents who may have questions or concerns about the replacement program. Establish a dedicated hotline or helpline staffed by knowledgeable personnel to address inquiries and provide guidance.

Non-Participation/Waivers: Homeowners in the CWS may not always be ready to engage with or communicate regarding the LSLR program. At present, the CWS lacks the authority to mandate homeowner access to private property or demand access for replacing the private side of the LSL. For those who choose not to participate, an Illinois Department of Public Health waiver form will be available. Efforts to communicate will be recorded for unresponsive homeowners. Nevertheless, these households will still receive complimentary point-of-use filters along with six replacement cartridges.

Appendix 1 Code of Ordinances

Appendix 2 Complete Lead Service Line Inventory

Appendix 3 Building Age Map

Appendix 4 Water Rates

Appendix 5 LSLR Details

## Appendix 6 Lead Service Line Replacement Outreach Materials

Appendix 7 Title

Appendix 8 Title

13.08.050 - Water service pipes; shut-off boxes; service boxes.

- A. Installation. All water service pipes from the mains to the premises served shall be installed by, and at the cost of, the owner of the property to be served or the applicant for the service. Such installation shall be under the inspection of the building commissioner or his or her designee.
- B. Pipes. No water service shall be installed unless it conforms to specifications outlined in the most recently adopted plumbing code of the village, a copy of which shall be kept on file by the clerk and shall be open to inspection by any person interested.
- C. Repairs. All repairs on water service pipes, exclusive of the saddle or corporation cock connected to the Village water main and starting with the water pipe connected to the saddle or the corporation cock, and plumbing systems of buildings shall be made by, and at the expense of, the owners of the premises served.

In the event an owner fails to repair a water service pipe, water shut-off box, or service box within ten (10) days from the date the village notifies the owner that such repairs are necessary, the village may perform such repair work and charge the owner of the premises served for the costs expended. In addition, in the event of an emergency, the village may repair any service pipes and charge the owner of the premises served for the costs expended.

In the sole discretion of the village, the costs expended for all repairs performed by the village may billed in up to twelve (12) equal installments as part of the regular utility bill.

Payment of the above costs are subject to the penalty, delinquency notice, and service disconnection provisions in Sections <u>13.16.020</u> and <u>13.16.030</u> of this title, and a lien against the premises for nonpayment of such costs shall be served to the same extent and with the same effect as for delinquencies pursuant to <u>Section 13.16.040</u> of this title.

The village shall not be responsible for any damage or necessary repairs that may result from the village's attempts to locate, inspect or utilize a water service pipe or water shut-off box.

- D. Location. It is unlawful to place any service pipe in the same excavation with, or directly over, any drain or sewer pipe.
- E. Shut-Off Boxes. Shut-off boxes or service boxes shall be placed on every water service pipe, and shall be located between the curb line and the sidewalk line where this is practicable. Such boxes shall be so located that they are easily accessible and shall be protected from frost.
- F. Service Boxes—Inspection Required. Before any water is turned on to any such premises, the service box must be inspected by the building commissioner or his or her designee and must be approved by him or her. If the building commissioner or his or her designee approves the service, the water will be turned on to such premises. Such fees shall be paid to the village clerk who shall give a certificate of approval to the applicant.

(Ord. 2006-0-11 § 2: Ord. 2002-0-04 § 2 (part); prior code § 8.05)

(Ord. No. 2012-0-02, § 2, 1-17-2012; Ord. No. 2012-0-03, § 2, 1-17-2012)

# RATES

## Water and Sewer

- Cost per 1,000 gallons: \$17.66 (Effective February 1, 2024)
- 47% of this charge is paid to outside agencies who provide the Village services; the remaining costs are used to pay for operating the system

## **Outside Agency Costs for Water and Sewer**

- Included in the water and sewer rate
- Water supply fee from the Central Lake County Water Agency (per 1,000 gallons): \$1.63 (rates are subject to change)
- Sewage treatment service fee from Lake County (per 1,000 gallons): \$6.47 (As of December 2020 rates are subject to change)

Grayslake Sustainability Plan 2017

NOTE: ① ONLY CURB BOXES THAT ARE NOT FUNCTIONING ARE TO BE REPLACED PER THE SPECIAL PROVISIONS. ANY CURB BOXES THAT ARE BURIED SHALL BE ADJUSTED PER THE SPECIAL PROVISIONS.

Dear Resident of Grayslake,

After applying for Federal and State government funds, the Village of Grayslake has been awarded money to replace the lead water pipes in town.

Please help the Village to remove all of these pipes by filling out the survey that can be accessed below. You have a better chance of getting your lead pipes replaced quickly if you complete the survey.

See the other side of this flyer for detailed instruction or scan the QR code below to begin the survey.

Sincerely,

Mayor Rhett Taylor

### IMPORTANT INFORMATION ABOUT LEAD IN YOUR DRINKING WATER

The Community Water System (CWS) has determined that your property is likely serviced by a lead water pipe. Lead can cause serious health problems, especially for pregnant women and children 6 years and younger. Please read this notice closely to see what you can do to reduce lead in your drinking water.

The CWS provides water that protects our residents from lead leaching into our water system. The CWS has not had a recent violation for lead levels. However, proper maintenance of the system to prevent the leaching of lead costs time, energy, and money. There is also the potential that something might go wrong and people with lead service lines would be exposed to lead in their drinking water.

#### **Health Effects of Lead**

It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of lead exposure is to infants, young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones and can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development.

### Sources of Lead

The source of water from Lake Michigan does not contain lead. When water is in contact with service lines or plumbing that contains lead for several hours, the lead may enter drinking water. Homes built before the 1960s in our community are more likely to have lead service lines and lead in solder and plumbing fixtures.

Don't forget, most lead exposure is still from small children ingesting lead paint, dust, and soil. In addition, lead can be found in certain types of pottery, pewter, brass fixtures, food, and cosmetics. Other sources include exposure in the work place and exposure from certain hobbies (lead can be carried on clothing or shoes). Lead is found in some toys, some playground equipment, and some children's metal jewelry. Wash your children's hands and toys often as they can come into contact with dirt and dust containing lead.

Steps That You Can Take to Reduce Your Exposure to Lead in Your Drinking Water

- 1. Run your water to flush out lead.
  - a. If the plumbing in your home is accessible; you may be able to inspect your own plumbing to

determine whether you have a lead service line. Otherwise, you will most likely have to hire a plumber, or allow the Village to inspect your water line.

- b. If you do not have a lead service line, running the water for 1 2 minutes at the kitchen tap should clear the lead from your household plumbing to the kitchen tap. Once you have done this, fill a container with water and store it in the refrigerator for drinking, cooking, and preparing baby formula throughout the day.
- c. If you do have a lead service line, flushing times can vary based on the length of your lead service line and the plumbing configuration in your home. The length of lead service lines varies considerably.
- d. The following flushing guidelines are recommended by the American Water Works Association after a lead service line is replaced:
  - i. Find all the faucets that will drain, including the basement and all floors in your house.
  - ii. Remove aerators and screens whenever possible, including the shower heads, from all faucets you plan to flush.
  - iii. Include the laundry tubs, hose-bibs, bathtubs, and showers as flushing points.
  - iv. After all the aerators are off, open the faucets in the basement or lowest floor in the house. Leave all faucets running at highest rate possible, using cold water.
  - v. After the faucets are all open in lowest floor, open the faucets on next highest floor of the house. Continue until faucets are open on all floors.
  - vi. After all faucets are opened, leave the water running for at least 30 minutes.
  - vii. After 30 minutes, turn off the first faucet you opened and continue to turn off other faucets in the same order you turned them on.
  - viii. Clean aerators/screens at each faucet. You may need to replace screens/aerators if too old or worn
- 2. Use cold water for drinking, cooking, and preparing baby formula.
  - a. Do not cook with or drink water from the hot water tap; lead dissolves more easily into hot water.
  - b. Do not use water from the hot water tap to make baby formula.
- 3. Look for alternative sources or treatment of water.
  - a. You may want to consider purchasing bottled water; or
  - b. Purchase a water filter that is certified to remove "total lead". The filter should be NSF 53 and NSF 42 certified.
- 4. Clean and remove any debris from faucet aerators on a regular basis.
- 5. Do not boil water to remove lead. Boiling water will not reduce lead.
- 6. Purchase lead free faucets and plumbing components.
- 7. Remove the entire lead service line.
  - a. As part of the separate Lead Service Line Replacement program, should you agree to participate, the Village will replace your lead service line from the water main to the meter inside your home.
- 8. Test your water for lead.
  - *a.* Call us at: 815-412-2015 to find out how to get your water tested for lead. While we do not do the testing, we can provide a list of laboratories certified to do the testing. Laboratories will send you the bottles for sample collection. Please note that we are not affiliated with the laboratories, and they will charge you a fee.
  - If test results indicate a lead level above 15 ug/L, bottled water should be used by pregnant women, breast- feeding women, young children, and formula-fed infants.
  - b. Approximately one month after service line replacement, testing is recommended. The sample should be a first-draw sample after water has not been used for at least 6 hours. The sample must be collected from a tap used frequently inside the home, preferably from the kitchen.
  - c. As a precaution, until the sample is collected and analyzed, the customer is recommended to do a miniflush of premise plumbing by running tap water each morning or when the water sits in the pipe for at least 6 hours. Flush for 5 minutes to displace water that has been sitting in the pipes inside the house and in the service line. This could include taking a shower, running the dishwasher, flushing a toilet, collecting water for plants/garden, or running the faucet. The customer should do this before using any

water for drinking, cooking, infant formula, and so on. Daily miniflushes should continue for six months or until lead sample results show the lead level is below the regulatory guideline. The customer should clean debris from aerators and screens once a month for six months. After six months, clean debris twice a year.

### For More Information

Call us at () or visit our website at (). Fore more information on reducing lead exposure around your home/building and the health effects of lead, visit EPA's website at <u>www.epa.gov/lead</u> or contact your health care provider.

Thank you for reading this notice, and we hope to hear from you soon.
